

**McCrone Research Institute (McRI)**, the independent not-for-profit educational and research organization in Chicago, is proud to announce our 2009 course calendar!

[Click here to view the McRI 2009 Course Calendar](#)

Courses taught at the McCrone Research Institute range from basic, introductory courses, emphasizing the proper use of the microscope, to specialized courses focusing on a particular technique, a particular material, or a particular industrial, forensic or environmental field of application. More than 45 different courses are offered, some several times each year, some annually, and some every other year.

McCrone Research Institute is fully equipped with polarized light and other light microscopes, as well as scanning electron microscopes, IR microspectrometers, Fluorescence microscopes, hot and cold stages, and all of the accessories, reagents, and library resources necessary for critical industrial, forensic and practical microscopy. Courses taught at the McCrone Research Institute range from basic microscopy, emphasizing the proper use of the microscope, to specialized microscopy focusing on a particular technique, a particular material, or a particular industrial, field of application. Information about courses and their descriptions can be accessed on this website. We will be happy to work with you in planning a curriculum and courses best suited to you and your company.
